(54) SILVER HALIDE COLOR PHOTOGRAPHIC SENSITIVE MATERIAL AND COLOR IMAGE FORMING METHOD USING SAME

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a color photographic sensitive material having improved processing dependency in color development and to provide a color photographic sensitive material which suppresses a modification in its color forming property in a pH change and in a change of the concentration of a developing agent particularly in color development with a color developing solution of \geq pH 11.0 and is excellent in graininess and image preservability.

SOLUTION: The silver halide color photographic sensitive material has at least one emulsion layer on the substrate and the at least one emulsion layer contains a coupler of formula 1 and a coupler of formula 2 in a molar ratio of 1:9 to 9:1. In the formulae 1 and 2, R¹-R⁴ are each H or a substituent; and X¹ and X² are each H or a group which is released in coupling with the oxidized body of a developing agent but at least one of X¹ and X² is H.
